Project Centre provides comprehensive transport planning, policy development and area strategies for local government, developers and transport service providers.

Our approach is outcome driven to ensure that our clients' aspirations are fully realised. We achieve this through the close working relationships we value with our clients which guarantees that our delivery teams are well briefed and focussed on meeting the objectives of the scheme or study.

Each commission we perform requires detailed analysis and research. We create integrated study teams which can also draw on our expertise in urban design, transport modelling, sustainable travel choices and traffic engineering and design.

With our approach, we have successfully delivered projects as diverse as town centre regeneration,

public transport interchange, housing and commercial developments and cycle programmes. Our transport planning experts provide the mixture of skills for innovation, analysis and assessment to provide practical and cost effective solutions.

WE OFFER

- Policy studies / strategy
- Forecast / modelling / appraisals
- Travel planning
- Transport assessments
